

MACRO ROTATIONS & LIQUIDITY DASHBOARD

SUPER MACRO DASHBOARD: EXECUTIVE SUMMARY (2026-06-02)

=====

EXECUTIVE QUANT SYNTHESIS (THE 'GAME PLAN')

CONTEXT: RISK-ON Regime | Vol: 16.2% | Fragility Score: -30.31
PROBS (1M): Odds of +5% Rally: 15% vs Odds of -5% Drop: 14%

ACTIONABLE PLAYBOOK:
 > PRIMARY BIAS: ACCUMULATE RISK. Macro score and probability skew favor upside.
 > CRITICAL: HIDDEN TAIL RISK. Buy OTM Puts (90-120 DTE). Spend ~2% of AUM/yr. Goal: Partial Hedge (Not Delta Neutral).

SENTIMENT: NEUTRAL

=====

THE VIEW (Legacy): Markets are currently in a TRANSITIONAL / CHOPPY regime with no clear trend. Liquidity conditions are stable. Inflation remains sticky at 3.0%, limiting Fed flexibility.

>> ENVIRONMENT FAVORS: Long exposures to Growth & Momentum factors.

=====

MACRO REGIME SCORE: 0.14 -> NEUTRAL / CHOPPY
LIQUIDITY VALVE: CLOSED (Real Yield: 1.94%)
MARKET FRAGILITY: WARNING: Market Fragility is HIGH. Breadth is narrowing while VIX is low (Complacency). This divergence often precedes 'air pockets' or sharp corrections.
CONSUMER HEALTH: EXPANSION (The Consumer is RESILIENT. Outperformance in Discretionary stocks suggests the economy is avoiding immediate recession.)
PLUMBING STATUS: CRITICAL (Repo Stress - SOFR Spike) (NFCI: -0.57)

The Liquidity Valve is NEUTRAL. Markets are chopping as real rates seek equilibrium.

=====

THE SHAPE OF THE MACRO REGIME (Radar Chart):
 We visualize the macro landscape as a polygon defined by 6 dimensions:
 Growth, Liquidity, Risk, Inflation, Rates, and Sentiment.
 - EXPANDED Polygon (Green) = Loose Financial Conditions & Growth (Bullish).
 - CONTRACTED Polygon (Red) = Tight Conditions & Fear (Bearish).
 Current State: Watch for 'Divergences' where Growth expands but Liquidity contracts.

STRATEGY PERFORMANCE SNAPSHOT (CAGR | Sharpe | MaxDD)

Liquidity Valve		13.8%		0.88 -12.7%
Core-Satellite (CCI)		12.7%		0.74 -19.3%
Vol Control (12%)		11.1%		0.63 -19.5%
Macro Regime		6.5%		0.62 -22.8%
SPY (Hold)		12.3%		0.57 -34.1%

--- REPORT CONTINUED (Page 2) ---

Sector Leaders (Top 3)		9.9%		0.48		-33.0%
Breadth Trend		5.9%		0.48		-19.9%
Consumer Rotation		7.5%		0.40		-26.8%
VIX Filter		4.1%		0.38		-17.4%

EQUITY ROTATIONS (Trend vs 200DMA):

- Value vs Growth: LEADING
- Cyclical vs Def: LEADING
- Small vs Large: LEADING
- HiBeta vs LoVol: LEADING

ACTIONABLE PLAYBOOK (MODERATE RISK-ON (Selective)):

LONGS: Cyclical (XLI, XLB)

SHORTS/AVOID: Defensives (XLU, XLP)

WATCH: Real Yields, USD Index, High Yield Spreads.

INVALIDATION: Thesis INVALIDATED if: 10Y Real Yields close > 2.0% OR Bitcoin closes below 200D MA.

STATISTICAL ANOMALIES (2-Sigma Extremes)

[OK] SOFR is OVERSOLD (-2.1 σ). Potential Bounce.

[OK] Fed_Funds is OVERSOLD (-2.1 σ). Potential Bounce.

[!] Fed_Assets_YoY is OVEREXTENDED (+3.0 σ). Prone to Mean Reversion.

[OK] Recession_Prob_Model is OVERSOLD (-2.4 σ). Potential Bounce.

[!] Spread_10Y3M is OVEREXTENDED (+2.5 σ). Prone to Mean Reversion.

PREDICTIVE ANALYTICS MODEL

PREDICTIVE ANALYTICS MODEL (Forward Looking):

1. NY FED RECESSION PROBABILITY (12M): 0.9% -> LOW RISK

2. MARKET INTERNALS (Leading Ratios):

- Risk Appetite : BULLISH
- Breadth : BULLISH
- Credit_Risk : RISK-ON
- Defensive : RISK-ON

GLOBAL MACRO & FX REGIME

1. RATE DIFFERENTIALS (Yield Advantage):

US-Bund: 1.53%, US-JGB: 2.39%

2. FX REGIME & PLAYBOOK:

- Neutral / No clear divergence signals.

CTA TREND MONITOR (Multi-Timeframe Signals):

Asset		Short(20D)		Med(60D)		Long(200D)		Status
-------	--	------------	--	----------	--	------------	--	--------

--- REPORT CONTINUED (Page 3) ---

SPY	BEAR	BULL	BULL	MODERATE UPTREND
QQQ	BEAR	BEAR	BULL	MODERATE DOWNTREND
IWM	BEAR	BULL	BULL	MODERATE UPTREND
EEM	BULL	BULL	BULL	STRONG UPTREND
TLT	BEAR	BEAR	BEAR	STRONG DOWNTREND
GLD	BEAR	BULL	BULL	MODERATE UPTREND
UUP	BEAR	BEAR	BEAR	STRONG DOWNTREND
BTC-USD	BULL	BULL	BEAR	MODERATE UPTREND

PORTFOLIO OPTIMIZATION (Macro-Adjusted):

Returns Adjusted for Regime Score: 0.14

Max Sharpe Portfolio (Sharpe: 2.28 | Vol: 7.7%)

Recommended Allocation:

- SPY : 63.4%
- TLT : 2.2%
- GLD : 30.0%
- UUP : 2.4%
- BTC-USD : 2.1%

CROSS-ASSET VOLATILITY REGIME

1. IMPLIED VOLATILITY RANK (1-Year Percentile):

- SP500 (VIX): 14.51 (Rank: 8%) -> COMPLACENCY
- Nasdaq (VXN): 19.75 (Rank: 19%) -> COMPLACENCY
- Gold (GVZ): 23.80 (Rank: 50%) -> NORMAL
- Rates (MOVE): 62.36 (Rank: 7%) -> COMPLACENCY

2. VOLATILITY INTERPRETATION:

- High Rank (>80%): Markets pricing extreme stress.
- Low Rank (<20%): Markets pricing perfection.

RISK MANAGEMENT (VaR)

1. CORE-SATELLITE PORTFOLIO RISK (Daily):

- 95% VaR: -1.21% (Max loss on 95% of days)
- 95% CVaR: -1.88% (Avg loss on worst 5% of days)
- Interpretation: NORMAL RISK PROFILE.

MACRO RISK WATCH

1. YIELD CURVE (10Y-2Y): 0.72% -> NORMAL
2. CREDIT SPREADS (HY): 2.83% -> CALM

MONETARY PLUMBING & ECONOMY

--- REPORT CONTINUED (Page 4) ---

1. LIQUIDITY IMPULSE (YoY):

- M2 Money Supply: 4.3% -> EXPANSION
- Fed Balance Sheet: -3.1% (QT/QE Monitor)

2. ECONOMIC HEALTH:

- CPI Inflation (YoY): 3.0%
- Unemployment Rate: 4.6%

INSTITUTIONAL VIEWS (JPM 2026)

1. REGIONAL STYLE VIEWS (2026 Outlook):

- US: Momentum (OW), Growth (OW), Low Vol (OW). UW: Small Caps.
- Europe: Value (OW), Beta (OW). UW: Momentum, Growth, Low Vol.
- Japan: Momentum (OW), Value (OW), Quality (OW), Low Vol (OW).
- Asia xJ: Value (OW), Quality (OW), Low Vol (OW). UW: Beta, Size.

2. KEY THEMES (2026):

- AI / Datacenter: "AI Compute Supercycle" (OW Semis/Tech).
- Deregulation: "Trump Agenda" (OW Financials/Small Biz).
- Resources: "Supply Chain De-risking" (OW Rare Earths/Uranium).

3. THEME VALIDATION (3-Month Momentum):

- AI/Tech (SMH) : 2.0% -> NEUTRAL
- Deregulation (KRE) : 8.5% -> CONVERGENCE (Bullish)
- Resources (REMX) : 16.0% -> CONVERGENCE (Bullish)
- Uranium (URA) : -12.4% -> DIVERGENCE (Bearish)
- Momentum (MTUM) : -0.3% -> NEUTRAL
- Quality (QUAL) : 1.6% -> NEUTRAL
- Low Vol (USMV) : 1.0% -> NEUTRAL

QUANT LAB INSIGHTS

1. MULTI-ASSET QUANT REGIMES & OPTION PLAYBOOKS:

- SPY: BULLISH Bias | Vol: LOW (EXPANDING) -> STRATEGY: Short Put Spread / Cov. Call (Sell Vol)
- QQQ: BULLISH Bias | Vol: LOW (STABLE) -> STRATEGY: Long Call / Debit Spread (Cheap Vol)
- IWM: BULLISH Bias | Vol: LOW (EXPANDING) -> STRATEGY: Short Put Spread / Cov. Call (Sell Vol)
- TLT: NEUTRAL Bias | Vol: LOW (EXPANDING) -> STRATEGY: Iron Condor / Short Straddle (Harvest Vol)
- GLD: BULLISH Bias | Vol: LOW (CONTRACTING) -> STRATEGY: Trend Following (Directional)

2. SPY ATM GREEKS (Risk Sensitivity - 30D Call):

- Delta: 0.54 (Directional Risk)
- Gamma: 0.0125 (Convexity/Acceleration)
- Vega: 0.78 (Vol Sensitivity)

--- REPORT CONTINUED (Page 5) ---

- Theta: -0.25 (Time Decay)

QUANT & OPTIONS STRUCTURE

1. VIX TERM STRUCTURE: NORMAL (Contango)
(Spot VIX: 14.51 vs 3M VIX: nan)

FLOWS & POSITIONING (New Alpha Factors)

1. NET LIQUIDITY (Fed-TGA-RRP): \$-830.67T -> NEUTRAL
2. CRASH SIGNAL (VIX Term Struct): 0.81 -> NORMAL (Contango)
3. TAIL RISK (SKEW): 141.86 -> HIGH RISK (Whales Hedging)

The Shape of the Macro Regime: EXPANSIONARY (1-Year Percentile Rank)

PREDICTIVE ANALYTICS: MACRO & MARKET INTERNALS

NY Fed Recession Probability Model (Current: 0.9%)

Market Internals: Leading Ratios (Normalized)

Predictive Analytics:

- Recession Risk: LOW (0.9%). No immediate curve-driven signal.
- Leading Indicators: Watch for 'Cyclical' vs 'Defensive' divergence. If Defensives lead, risk-off/recession is likely.

1. Inflation Expectations Term Structure

Long-Term Anchor (5Y5Y): 2.22% -> ANCHORED

2. Inflation Term Premium (Expectations vs Reality)

Spread: -0.78%

1. Liquidity Impulse: Money Supply & Fed Assets

2. Overnight Rates Monitor (Plumbing): 3.75% vs Fed 3.64% -> STRESS (Collateral Shortage)

3. Global Liquidity Wrecking Ball (DXY): BEARISH

4. Inflation Trend (CPI)

5. Labor Market Health (Unemployment)

1. Global Sovereign Bond Yields (10Y Nominal)
Monitor: Yield Divergence drives Capital Flows

2. The 'Carry Trade' Engine (Yield Spread vs FX)
Status: NEUTRAL

3. Currency Momentum (1-Year Relative Performance, Normalized=100)

Global Macro & FX Insights:
• US Yields: 4.19%. vs Bunds: 1.53% spread.

1. Real Interest Rates (The Cost of Capital)

Current: 1.94% -> NEUTRAL

1. Yield Curve (10Y - 2Y): Recession Watch

2. Credit Stress (High Yield Spreads)

3. Bond Market Fear (MOVE Index): NORMAL

4. Sector Rotation Map (RRG Proxy)

Analysis & Key Signals:

- Yield Curve (10Y-2Y): NORMAL (0.72%). No immediate recession signal from rates.
- Credit Spreads: CALM (2.83%). Corporate bond market shows no panic.

1. Cross-Asset Correlation Matrix (30-Day Rolling)
Green/Red = Diversification | Dark = High Correlation

2. Stock-Bond Correlation Regime
Current: -0.00 -> NORMAL DIVERSIFICATION

Cross-Asset Regime:
• Correlation Matrix: Dark Red = Assets moving together (Systemic Risk). Blue = Diversification working.
• Stock/Bond Correlation: -0.00. UNCORRELATED. Standard diversification environment.

Forward Looking Signals:

- Recession Model: LOW RISK (0.9%). Yield curve does not signal imminent downturn.
- Market Regime: Verify with GMM plot. (State 0 = Bull, State 1 = Volatile/Bear).
- Seasonality (Jun): Check bar chart. Historic avg return provides bias.

1. The Real Liquidity Engine (Fed - TGA - RRP)
Current: \$-830.67T | Trend: NEUTRAL

2. Volatility Term Structure (Crash Signal)
Status: NORMAL (Contango)

3. Tail Risk Monitor (Whale Positioning)
Status: HIGH RISK (Whales Hedging)

Institutional Flows & Risk:
• Net Liquidity: \$-830.67T. Tracks Fed Balance Sheet - TGA - RRP. Rising = Asset Support.
• Vol Term Structure: CONTANGO (0.81). Normal market structure.
• Tail Risk (SKEW): HIGH (142). Whales are hedging against a crash.

SPY Volatility Regime: GARCH Model vs Realized

Monte Carlo: SPY 30-Day Projection (100 Paths)

SPY ATM Option Greeks (Theoretical)

Metric	Value
ATM Call Price (30D)	\$13.93
Delta	0.541
Gamma	0.0125
Theta (Daily)	-0.254
Vega (1%)	0.777
Rho	0.292

Quant Lab Insights:

- Volatility Regime (21D Realized): 0.1%. Low Volatility (Complacency/Bull Trend).
- Monte Carlo Projection (Mean): 1.2% expected return over 30 days.
- Option Greeks: Delta measures directional exposure. Vega measures sensitivity to volatility spikes.

QUANT LAB: MONTE CARLO SIMULATION (SPY)

Geometric Brownian Motion: 63-Day Forecast Cone

Distribution of Simulated Returns (Win Probability: 62.2%)

INTERPRETATION GUIDE:

- THE CONE: Shows the range of probable price paths based on drift (trend) and diffusion (volatility).
- MEDIAN PATH (Blue): The 'Base Case' projection.
- 95% CONFIDENCE (Light Blue): Outlier scenarios. If price hits the edge, it is empirically overextended.
- USE CASE: Validates price targets. If your target is outside the cone, it requires an extreme event.

QUANT LAB: ADVANCED STOCHASTIC MODELS

1. Heston Stochastic Volatility Model (1-Year Simulation)

2. Simulated Volatility Paths (Stochastic Process)

3. Markov Regime Switching (Current: Low Vol (Calm))

INTERPRETATION GUIDE:

- 1. HESTON MODEL: Simulates Stochastic Volatility (Vol is not constant, it's a process).
- 2. REGIME SWITCHING (HMM): Detects 'Calm' (Low Vol) vs 'Turbulent' (High Vol) market states.
- 3. USE CASE: Calibrating options strategies. Buy Volatility when regime switches to 'Turbulent'.

QUANT LAB: MEAN REVERSION (OU PROCESS)

1. Yield Curve Spread (IEF 7-10Y - SHY 1-3Y)

Mean Reversion Speed (Theta): 0.19 | Half-Life: 3.6 Days | Current Z-Score: -0.45

2. USD/JPY Proxy (UUP - FXY)

Mean Reversion Speed (Theta): 0.15 | Half-Life: 4.6 Days | Current Z-Score: -0.10

INTERPRETATION GUIDE:

1. ORNSTEIN-UHLENBECK (OU): Models Mean-Reverting assets (Spreads, Pairs).
2. Z-SCORE: Measures distance from the mean. > 2.0 is statistically stretched (95% confidence).
3. SIGNAL: High Z-Score + High Mean Reversion Speed (Theta) = Strong probability of snap-back.

QUANT LAB: JUMPS & MARKET MICROSTRUCTURE

1. Merton Jump Diffusion (Simulating 'Fat Tail' Risks) Params: 2.0 Jumps/Yr, Mean Size -10% (Crash Scenarios)

2. Hawkes Process (Self-Exciting Clustering) Modeling 'Volatility Clustering' or 'Flash Crashes'

INTERPRETATION GUIDE:

1. MERTON JUMPS: Models sudden 'Crashes' (Jumps) that normal models miss. Shows 'Gap Risk'.
2. HAWKES PROCESS: Models 'Self-Excitement' (Clustering). One shock triggers others (Feedback Loops).
3. APPLICATION: Stress-testing portfolios against 'Black Swans' and 'Flash Crashes'.

QUANT LAB: ANTI-FRAGILITY & BLACK SWAN VALIDATION

1. Tail Risk Analysis (Actual vs Normal)

Skew: -0.31 (Target > 0) | Kurtosis: 20.17 (Fat Tails)

2. Asymmetry Analysis (Taleb Ratio)

Ratio: 0.85 (Target > 1.1)

PORTFOLIO CLASSIFICATION:

ROBUST / NEUTRAL

The 'Turkey' Score: -30.31
(Hidden Tail Risk)

INTERPRETATION GUIDE:

1. TAIL RISK: We want the blue distribution to shift RIGHT (Positive Skew). Fat left tails indicate crash risk.
2. TALEB RATIO: Measures payoff asymmetry. Ratio > 1.1 means upside volatility > downside volatility (Good).
3. TURKEY SCORE: A high negative score means steady small gains but massive hidden tail risk (like a Turkey before Thanksgiving).
4. GOAL: We seek 'Anti-Fragility' -> Positioning that benefits from volatility and disorder (Convex Payoffs).

QUANT LAB: SCENARIO ANALYSIS & CONTINGENCIES

1. Move Probabilities (Monte Carlo)

Target	1-Month Prob	3-Month Prob
2%	34.3%	58.1%
5%	7.3%	33.3%
10%	0.2%	8.5%
15%	0.0%	0.6%

2. Target Visualization (3-Month)

3. TACTICAL CONTINGENCY PLAYBOOK (Regime: Normal)

Scenario	Condition	Action	Key Level
Normal Volatility	Standard Oscillations	Sell Mean Reversion. Market Neutral.	Range Bound

INTERPRETATION GUIDE:

1. MOVE PROBABILITIES: Probability of touching price levels based on current volatility regime.
2. CONTINGENCIES: Pre-planned actions to remove emotion. If 'Condition' is met, execute 'Action'.
3. FRAGILITY CHECK: Playbook adapts to Skew/Kurtosis. Negative Skew = Expensive Puts = Risk Reversals preferred.

1. THE EFFICIENT FRONTIER (5000 Simulated Portfolios)
Risk vs Return Trade-off

2. OPTIMAL ASSET ALLOCATION (Mean-Variance)

Asset	Min Volatility	Max Sharpe (Optimal)
SPY	13.0%	63.4%
TLT	25.1%	2.2%
GLD	12.1%	30.0%
UUP	49.2%	2.4%
BTC-USD	0.6%	2.1%

Portfolio Optimization Insights:

- Max Sharpe Portfolio: Heaviest allocation is SPY (63.4%). Maximizes risk-adjusted return.
- Min Volatility Portfolio: Heaviest allocation is UUP (49.2%). Focuses on capital preservation.
- Efficient Frontier: Portfolios on the top-left edge offer the highest return for a given level of risk.

Backtest & 1-Year Projection (Median Path)

Strategy	Hist. CAGR	Sharpe	Max Drawdown	Exp. CAGR (1Y)
Liquidity Valve	13.8%	0.88	-12.7%	9.5%
Core-Satellite (CCI)	12.7%	0.74	-19.3%	8.9%
Vol Control (12%)	11.1%	0.63	-19.5%	8.2%
Macro Regime	6.5%	0.62	-22.8%	4.0%
SPY (Hold)	12.3%	0.57	-34.1%	8.3%
Sector Leaders (Top 3)	9.9%	0.48	-33.0%	6.3%
Breadth Trend	5.9%	0.48	-19.9%	3.5%
Consumer Rotation	7.5%	0.40	-26.8%	4.1%
VIX Filter	4.1%	0.38	-17.4%	2.6%
